EDUCATION

Georgia Institute of Technology

Expected Graduation: Dec 2026

Bachelor of Science in Computer Science | GPA: 3.9/4.0

Atlanta, GA

- **Concentrations:** Artificial Intelligence & Information Internetworks
- **Relevant Coursework:** Data Structures, Algorithms, Systems, Networking, Computer Vision, AI/ML

EXPERIENCE

IBM

May 2026 – Present

Software Engineer Intern

San Jose, CA

Georgia Tech - College of Computing

Jan 2026 – Present

Software Research Assistant

Atlanta, GA

- Architected TokenSmith, a local RAG system using llama.cpp for efficient C++ inference, achieving sub-300ms retrieval over 100+ page technical documents.
- Implemented a hybrid retrieval pipeline combining FAISS dense vector search and BM25 scoring, improving answer grounding and reducing hallucination in domain-specific technical Q&A.

Georgia Tech - EPIC Lab

Jan 2025 – May 2026

Software Research Assistant

Atlanta, GA

- Developed ML-driven exoskeleton controllers by processing 30,000+ samples collected from stroke patients, optimizing intent prediction across 8 gait modes for rehabilitative use.
- Engineered an automated deployment orchestrator for NVIDIA Jetson via SSH ControlMaster, reducing experiment setup time by 80% (from 5min to <1min) for 25+ concurrent researchers.

K.L. Scott & Associates

Oct 2025 – Dec 2025

Software Engineer Intern

Atlanta, GA

- Orchestrated Node.js-based automation pipelines using n8n and OpenAI API, integrating multi-source inputs (Microsoft Graph, SurveyMonkey, LlamaParse) across 20+ workflows per cycle.
- Architected a production PostgreSQL database on Azure with 24 normalized tables, ensuring data integrity and optimizing query performance for AI-driven analytics.

SendSafely

May 2025 – Aug 2025

Software Engineer Intern

Newark, DE

- Engineered automated CI/CD pipelines for cross-platform SDKs (Python, Java, JavaScript) using GitHub Actions and AWS S3, standardizing release cycles across 10+ repositories.
- Strengthened infrastructure security by migrating encryption key management from AWS Secrets Manager to KMS, automating routine key rotation and access control.

PROJECTS

Exoskeleton Orchestrator | Python, JavaScript, HTML/CSS, Linux, SSH, HTTP Server, Threading

- Built a distributed control system for NVIDIA Jetson-based exoskeleton controllers using low-latency SSH ControlMaster sessions and a lightweight web interface, reducing remote command startup time from 3 seconds to sub-second.
- Automated end-to-end experiment setup (Wi-Fi, IMU, motor, XSensor, controller readiness), eliminating 6 manual steps and reducing setup time from 3–5 minutes to <1 minute per run across multiple devices.

Collab-Plan AI | Python, FastAPI, SQL, Ollama, faster-whisper, Hugging Face, React

- Built a full-stack AI platform using FastAPI, SQLite, and React with a local Ollama LLM to convert unstructured conversations into structured summaries, tasks, and questions across 3 input modes.
- Developed an end-to-end audio pipeline using FFmpeg, webrtcvad, faster-whisper, and pyannote.audio to support transcription, diarization, and timestamped outputs.

SKILLS

Languages: Python, Java, SQL, C, TypeScript, JavaScript

AI/ML: RAG, llama.cpp, FAISS, BM25, Hugging Face, PyTorch, Scikit-learn

Systems/Backend: Node.js, FastAPI, PostgreSQL, NVIDIA Jetson, SSH Orchestration, REST APIs

Tools/DevOps: AWS (KMS, S3, Secrets Manager), Docker, GitHub Actions, CI/CD, n8n, Jira
