EDUCATION

Georgia Institute of Technology

Bachelor of Science in Computer Science

Expected: Dec 2026

Atlanta, GA

- **GPA:** 3.94/4.0
- **Coursework:** Data Structures, Algorithms, Systems, Networking, Vision, Artificial Intelligence, Machine Learning, Databases

EXPERIENCE

Research Assistant

Jan 2026 – Present

Georgia Tech College of Computing

Atlanta, GA

- Developing TokenSmith, a local LLM-based RAG system using FAISS vector indexing and custom retrieval pipelines to enable low-latency semantic search and Q&A over 100+ page textbook PDFs.
- Implemented hybrid retrieval combining dense vector search and BM25 scoring, improving answer relevance and reducing retrieval latency to sub-second response times for interactive queries.

Software Engineer

Jan 2025 – Present

Georgia Tech EPIC Lab

Atlanta, GA

- Designed ML-driven exoskeleton controllers evaluated across 8 gait modes using ~30,000 IMU and motor encoder samples to improve real-time intent prediction under variable walking conditions.
- Engineered a real-time control and visualization system with a local API server and SSH orchestration, enabling 25 researchers to deploy NVIDIA Jetson controllers in 1 minute per session across multiple devices.

Software Engineer Intern

Oct 2025 – Dec 2025

K.L. Scott & Associates

Atlanta, GA

- Engineered Node.js-based automation pipelines using n8n and OpenAI API, integrating Microsoft Graph, SurveyMonkey, Mural, and LlamaParse to process multi-source inputs across 20+ workflows per cycle.
- Designed and deployed a production PostgreSQL database on Azure with 24 normalized tables to store structured outputs from AI-driven workflows, improving query efficiency for downstream analytics.

Software Engineer Intern

May 2025 – Aug 2025

SendSafely

Newark, DE

- Built CI/CD pipelines for Python, Java, and JavaScript SDKs using GitHub Actions, AWS S3, and shell scripting, enabling automated build and release workflows across internal and client-facing repositories.
- Migrated encryption key management from AWS Secrets Manager to AWS KMS, standardizing key usage across services and eliminating routine manual key rotation operations.

Computer Science Tutor

Sep 2023 – Dec 2024

GSU Department of Computer Science

Atlanta, GA

- Led a team of 12 tutors for CS 1301/1302 (200+ students), running weekly problem-solving sessions on object-oriented programming and data structures for ~20 attendees.

PROJECTS

Exoskeleton Orchestrator | Python, JavaScript, HTML/CSS, Linux, SSH, HTTP Server, Threading

- Built a distributed control system for NVIDIA Jetson-based exoskeleton controllers using low-latency SSH ControlMaster sessions and a lightweight web interface, reducing remote command startup time from 3 seconds to sub-second.
- Automated end-to-end experiment setup (Wi-Fi, IMU, motor, XSensor, controller readiness), eliminating 6 manual steps and reducing setup time from 3–5 minutes to ~1 minute per run across multiple devices.

Collab-Plan AI | Python, FastAPI, SQL, Ollama, faster-whisper, Hugging Face, React

- Built a full-stack AI platform using FastAPI, SQLite, and React with a local Ollama LLM to convert unstructured conversations into structured summaries, tasks, and questions across 3 input modes.
- Developed an end-to-end audio pipeline using FFmpeg, webrtcvad, faster-whisper, and pyannote.audio to support transcription, diarization, and timestamped outputs.

SKILLS

Languages: Python, Java, Kotlin, C, TypeScript, JavaScript, SQL

ML/AI Systems: RAG, FAISS, BM25, Hugging Face, PyTorch, LlamaParse, faster-whisper

Backend/Systems: Node.js, FastAPI, REST APIs, PostgreSQL, MySQL, SQLite

Cloud/DevOps: AWS, Docker, GitHub Actions, CI/CD, n8n, Jira

Frontend/Mobile: React, Jetpack Compose, Android Studio
