Education

Georgia Institute of Technology

Master of Science in Computer Science

Atlanta, GA

Expected Dec 2027

Georgia Institute of Technology

Bachelor of Science in Computer Science | GPA: 3.95/4.00

Atlanta, GA

Expected Dec 2026

Professional Experience

Software Engineer Intern

IBM

May 2026 – Aug 2026

San Jose, CA

- Built a release intelligence platform using Django, IBM Db2, and watsonx.ai to parse, cluster, and deduplicate 65,000+ issues across 16 repositories, generating consolidated release changelogs for 12 engineering teams.
- Engineered Helm-based validation pipelines for 4 Kubernetes environments, concurrently checking 300+ AWS secrets and 500+ container images, reducing end-to-end validation time from 10 minutes to 1 minute.

Software Engineer Intern

K.L. Scott & Associates

Oct 2025 – Dec 2025

Atlanta, GA

- Developed a containerized multi-agent verification pipeline using Python, FastAPI, LangChain, Docker, and OpenAI APIs, achieving a 93% completion rate on 5-stage workflows spanning 2,100+ insurance policy clauses.
- Architected a normalized 24-table PostgreSQL backend on Azure, persisting 5,000+ execution states and traceable audit logs across 4 coordinated AI agents.

Software Engineer Intern

SendSafely

May 2025 – Aug 2025

Newark, DE

- Implemented a secure document download service using Java and Spring Boot, integrating AWS Secrets Manager for credential validation and serving 50,000+ monthly encrypted file requests at sub-200ms TTFB.
- Automated CI/CD pipelines using GitHub Actions and AWS S3 for cross-platform SDKs (Python, Java, JavaScript), streamlining versioning and artifact distribution across 10+ active repositories.

Academic Experience

Teaching Assistant | CS 3300: Software Engineering

Georgia Tech College of Computing

Aug 2026 – Present

Atlanta, GA

- Supported a 140-student software engineering course through weekly project syncs with a 28-student cohort and office hours, guiding Java/Spring Boot, REST APIs, testing, architecture/design patterns, and Google Cloud.

Research Assistant | Advanced Database Systems Lab

Georgia Tech College of Computing

Jan 2026 – Present

Atlanta, GA

- Benchmarked dense, sparse, and hybrid retrieval using FAISS and BM25 for a textbook RAG system, improving Recall@5 from 64% to 88% while delivering sub-300ms source-cited answers for 100+ students.

Research Assistant | Exoskeleton & Prosthetic Intelligent Controls Lab

Georgia Tech Research Institute

Jan 2025 – May 2026

Atlanta, GA

- Trained TCN intent prediction models in PyTorch on 30,000+ stroke patient gait samples with 0.882 macro F1 after Optuna tuning, and built Jetson-based inference pipelines that cut setup time from 5 minutes to under 1 minute.

Projects

Adversarial AI Game Agent | Python, Scikit-learn, Alpha-Beta Pruning, State Caching

- Created a turn-based adversarial AI agent using Alpha-Beta Pruning, A* pathfinding, probabilistic belief modeling, and regression-tuned heuristics on an 18,000+ game dataset to achieve an 84% win rate against heuristic baselines.

5-Stage Pipelined Processor | Verilog, CircuitSim, Assembly, Computer Architecture

- Implemented a functionally complete 32-bit, 5-stage pipelined CPU in CircuitSim comprising 17 subcircuits and 16 registers, with priority-encoded forwarding and zero-vector flush logic to eliminate data and control hazards.

Skills

Languages	Python, Java, C/C++, C#, SQL, TypeScript, JavaScript
Backend	Django, Spring Boot, .NET, FastAPI, PostgreSQL, IBM Db2, REST APIs
AI/ML	RAG, FAISS, BM25, Hugging Face, PyTorch, Scikit-learn, llama.cpp
Tools/Cloud	Linux, Docker, Kubernetes, Helm, GitHub Actions, AWS, Google Cloud, NVIDIA Jetson
