

# EVAN LEE

evanj3034@gmail.com | github.com/jlee600 | linkedin.com/in/jlee4223 | evanlee.site

## EDUCATION

### Georgia Institute of Technology

Expected Graduation: May 2027

Bachelor of Science in Computer Science | GPA: 3.9/4.0

Atlanta, GA

- **Concentrations:** Artificial Intelligence & Information Internetworks
- **Relevant Coursework:** Data Structures, Algorithms, Systems, Networking, Computer Vision, AI/ML

## EXPERIENCE

### Software Engineer Intern

May 2026 – Present

IBM

San Jose, CA

- Selected for the WatsonX Orchestrate team to develop agentic AI features and LLM-driven code generation tools (Project Bob).

### Research Assistant

Jan 2026 – Present

Georgia Tech College of Computing

Atlanta, GA

- Architected and deployed TokenSmith, a local RAG system, to 100+ active users, achieving sub-300ms retrieval over 2000+ page technical documents by optimizing C++ inference via llama.cpp.
- Improved search precision by 15% across 30+ benchmarked queries using a hybrid FAISS + BM25 pipeline fine-tuned to balance keyword and semantic relevance.

### Research Assistant

Jan 2025 – May 2026

Georgia Tech EPIC Lab

Atlanta, GA

- Developed ML-driven exoskeleton controllers by processing 30,000+ samples collected from stroke patients, optimizing intent prediction across 8 gait modes for rehabilitative use.
- Engineered an automated deployment orchestrator for NVIDIA Jetson via SSH ControlMaster, reducing experiment setup time by 80% (from 5min to <1min) for 25+ concurrent researchers.

### Software Engineer Intern

Oct 2025 – Dec 2025

K.L. Scott & Associates

Atlanta, GA

- Orchestrated Node.js-based automation pipelines using n8n and OpenAI API, integrating multi-source inputs (Microsoft Graph, SurveyMonkey, LlamaParse) across 20+ workflows per cycle.
- Designed a 24-table normalized PostgreSQL schema on Azure to support 40+ daily AI-generated records, achieving sub-100ms query latency for high-frequency analytics.

### Software Engineer Intern

May 2025 – Aug 2025

SendSafely

Newark, DE

- Engineered automated CI/CD pipelines for cross-platform SDKs (Python, Java, JavaScript) using GitHub Actions and AWS S3, standardizing release cycles across 10+ repositories.
- Strengthened infrastructure security by migrating encryption workflows to AWS KMS, fully automating the rotation of 75+ cryptographic keys and streamlining access control across production services.

## PROJECTS

### Exoskeleton Orchestrator | Python, JavaScript, HTML/CSS, Linux, SSH, HTTP Server, Threading

- Built a distributed control system for NVIDIA Jetson-based exoskeleton controllers using low-latency SSH ControlMaster sessions and a lightweight web interface, reducing remote command startup time from 3 seconds to sub-second.
- Automated end-to-end experiment setup (Wi-Fi, IMU, motor, XSensor, controller readiness), eliminating 6 manual steps and reducing setup time from 3–5 minutes to <1 minute per run across multiple devices.

### Collab-Plan AI | Python, FastAPI, SQL, Ollama, faster-whisper, Hugging Face, React

- Built a full-stack AI platform using FastAPI, SQLite, and React with a local Ollama LLM to convert unstructured conversations into structured summaries, tasks, and questions across 3 input modes.
- Developed an end-to-end audio pipeline using FFmpeg, webrtcvad, faster-whisper, and pyannote.audio to support transcription, diarization, and timestamped outputs.

## SKILLS

**Languages:** Python, Java, SQL, C, TypeScript, JavaScript

**AI/ML:** RAG, llama.cpp, FAISS, BM25, Hugging Face, PyTorch, Scikit-learn

**Systems/Backend:** Node.js, FastAPI, PostgreSQL, NVIDIA Jetson, SSH Orchestration, REST APIs

**Tools/DevOps:** AWS (KMS, S3, Secrets Manager), Docker, GitHub Actions, CI/CD, n8n, Jira
