Education

Georgia Institute of Technology

Expected: Dec 2026

Bachelor of Science in Computer Science

Atlanta, GA

- **Cumulative GPA:** 3.94/4.0
- **Concentration:** Information Internetworks & Intelligence
- **Relevant Coursework:** Object-Oriented Programming, Data Structures, Systems & Network, Algorithms Analysis, Computer Networking, Artificial Intelligence, Computer Vision, Database Management, Computer Architecture

Experience

Undergraduate Researcher

Jan 2026 - Present

Project TokenSmith – ML-oriented text database system (advisor: Prof. Joy Arulraj)

Atlanta, GA

Software Engineer

Jan 2025 – Present

Georgia Tech EPIC Lab

Atlanta, GA

- Developed ML-driven exoskeleton controllers evaluated across 8 gait modes using ~30,000 IMU and motor encoder samples, improving intent-prediction stability under variable walking speeds.
- Built a real-time control and visualization dashboard with a local API server and SSH-based orchestration, enabling 25 doctoral researchers to configure and deploy NVIDIA Jetson controllers in under 2 minutes per session.

Software Engineer Intern

Oct 2025 – Dec 2025

K.L. Scott & Associates

Atlanta, GA

- Built Node.js-based research automation pipelines using n8n, integrating Microsoft Graph, SurveyMonkey, Mural, and LlamaParse to process multi-source inputs and eliminate manual handoff steps per project cycle.
- Designed and deployed a production PostgreSQL database on Azure with 24 normalized tables to support AI-driven planning workflows, serving structured outputs for downstream analysis and reporting tools.

Software Engineer Intern

May 2025 – Aug 2025

SendSafely

Newark, DE

- Implemented CI/CD pipelines for Python, Java, and JavaScript SDKs using GitHub Actions, AWS S3, and shell scripts, supporting automated builds and releases across multiple internal and client-facing repositories.
- Migrated encryption key management from AWS Secrets Manager to AWS KMS, removing the need for routine manual key rotation and standardizing key usage across production services.

OOP Head Tutor

Sep 2023 – Dec 2024

GSU Department of Computer Science

Atlanta, GA

- Led a team of 12 honors tutors supporting CS 1301/CS 1302 courses with over 200 enrolled students, organizing weekly review sessions for over 30 participants covering Object-Oriented Programming and Data Structures.
- Delivered over 40 original concept and coding problems, managing session logistics and improving student quiz performance by approximately 14%.

Projects

Collab-Plan AI | *Python, FastAPI, SQL, Ollama, faster-whisper, Hugging Face, React*

- Developed a full-stack AI-powered conversation platform integrating FastAPI, SQLite, and React, with local Ollama LLM to convert unstructured dialogue into structured summaries and tasks across 3 input modes.
- Implemented an audio and text processing pipeline using FFmpeg, websockets, faster-whisper, and pyannote.audio, improving transcription clarity by about 11% and enabling accurate speaker attribution.

Spotify-Wrapped Mock-up | *Java, Kotlin, Android Studio, XML, SQL*

- Directed 6 developers in building a Spotify Wrapped app on Android Studio, optimizing Spotify API response times by 2.5 seconds through batched HTTP request handling and asynchronous processing.
- Designed an optimized SQLite schema for user history management, improving local data retrieval performance by 29% while maintaining UI responsiveness under XML layout constraints.

Skills

Languages: Python, Java, Kotlin, C, TypeScript, JavaScript, SQL, Assembly

Technologies: REST APIs, PostgreSQL, MySQL, SQLite, FAISS, RAG, Android Studio

Frameworks & Cloud: PyTorch, FastAPI, React, Jetpack Compose, Hugging Face, AWS, GitHub Actions, n8n

Developer Tools: Git, Docker, NumPy, Scikit-learn, Jira, VS Code, IntelliJ
