Education

Georgia Institute of Technology

B.S./M.S. in Computer Science

- Master of Science in Computer Science
- Bachelor of Science in Computer Science | **GPA: 3.95/4.00**

Atlanta, GA

Expected Graduation: Dec 2027

Professional Experience

Software Engineer Intern

IBM

May 2026 – Present

San Jose, CA

- Built a release intelligence platform using Django, IBM Db2, and watsonx.ai to parse, cluster, and deduplicate 65,000+ GitHub issues, reducing issue investigation time from 15 minutes to under 3 minutes per issue.
- Engineered Helm-based validation pipelines for 4 Kubernetes environments, concurrently checking 300+ AWS secrets and 500+ container images to cut validation time from 10 minutes to 1 minute.

Software Engineer Intern

K.L. Scott & Associates

Oct 2025 – Dec 2025

Atlanta, GA

- Built a multi-agent document verification pipeline using Python, FastAPI, LangChain, Docker, and OpenAI APIs, automating 5-stage reasoning over 2,100+ insurance policy clauses.
- Designed and deployed a normalized 24-table PostgreSQL schema on Azure from scratch to persist agent memory, policy rules, and audit logs for Agentic AI workflows.

Software Engineer Intern

SendSafely

May 2025 – Aug 2025

Newark, DE

- Implemented a secure document download service in Java and Spring Boot, integrating AWS Secrets Manager to validate client credentials and retrieve encryption keys for file decryption used by Fortune 500 enterprise customers.
- Engineered automated CI/CD deployment pipelines for cross-platform SDKs (Python, Java, JavaScript) using GitHub Actions and AWS S3, standardizing release cycles across 10+ repositories.

Academic Experience

Teaching Assistant | *CS 3300: Software Engineering*

Georgia Tech College of Computing

Incoming Fall 2026

Atlanta, GA

- Topics: Software engineering lifecycle, Java/Spring Boot, Maven, AJAX, Google Cloud, GenAI-assisted development.

Research Assistant | *Advanced Database Systems Lab*

Georgia Tech College of Computing

Jan 2026 – Present

Atlanta, GA

- Created and deployed TokenSmith, a textbook-grounded RAG system using Python, FAISS, BM25, and llama.cpp, enabling 100+ students to query uploaded course materials with source-cited answers and sub-300ms retrieval.

Research Assistant | *Exoskeleton & Prosthetic Intelligent Controls Lab*

Georgia Tech Research Institute

Jan 2025 – May 2026

Atlanta, GA

- Developed ML intent prediction and NVIDIA Jetson deployment tools for a stroke rehabilitation exoskeleton, processing 30,000+ patient samples across 8 gait modes and reducing setup time by 80% from 5 minutes to under 1 minute.

Projects

Adversarial AI Game Agent | *Python, Scikit-learn, Alpha-Beta Pruning, State Caching*

- Engineered a turn-based adversarial AI agent using Alpha-Beta Pruning, A* pathfinding, probabilistic belief modeling, and regression-tuned heuristics on an 18,000+ game dataset, placing 19th out of 102 teams.

5-Stage Pipelined Processor | *Verilog, CircuitSim, Assembly, Computer Architecture*

- Implemented a functionally complete 32-bit, 5-stage pipelined CPU in CircuitSim comprising 17 subcircuits and 16 registers, with priority-encoded forwarding and zero-vector flush logic to eliminate data and control hazards.

Skills

Languages: Python, Java, C/C++, C#, SQL, TypeScript, JavaScript

Backend/Databases: Django, Spring Boot, .NET, FastAPI, PostgreSQL, IBM Db2, REST APIs

AI/ML: RAG, FAISS, BM25, Hugging Face, PyTorch, Scikit-learn, llama.cpp

Tools/Cloud: Docker, Kubernetes, Helm, Jenkins, GitHub Actions, AWS, Google Cloud, NVIDIA Jetson
